                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method of identifying binding site domains (BSD) that retain the capacity of binding to a predetermined epitope when positioned C-terminal of at least one further domain in a recombinant bior militivalent polypeptide. The method comprises (a) testing a panel of BSD displayed on the surface of a biological display system as part of a CC fusion protein for binding to a predetermined epitope, where the fusion protein comprises an additional domain positioned N-terminal of the BSD and an amino acid sequence that mediates anchoring of the fusion protein to the surface of the display system; and (b) identifying a BSD that to the surface of the display system; and (b) identifying a BSD that CC binds to the predetermined epitope. The method is useful to identify bior or multivalent polypeptides that comprise antibody binding sites capable of efficiently binding to the corresponding antigen. The polypeptides or antibodies identified by the method are useful therapeutically and CC diagnostically, for e.g. cancer and autoimmune diseases. ScFv-antibody finanches in the inference of the solvent position within bifunctional antibody and antipatorial antibody and antipatorial antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Phage display system for identification retaining capacity to bind an epitope

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hyperplastic, and cancerous epithelial cells or portions. Also it can be used for identifying the recurrence of such diseases, particularly when the disease is localised in a particular biological material of the patient for e.g. recurrence of prostatic disease. They can also be used alone or bound to a substance effective to kill cancerous prostate epithelial cells as a therapy for prostate cancer. Binding and internalising of the antibody with the prostate specific membrane antigen, permits the therapeutic use of intracellularly acting cytotoxic agents. (I) targets only prostate epithelial cells and other tissue are spared which provides safer treatment particularly for elderly patients. The antibodies bind to living prostate cells and treatments using these antibodies are more effective than those which target lysed prostate
                                                               Region?
                                                                                                                     Region
                                                                                                                                                                                                                                                                                Mus musculus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Tie2 receptor antagonist antibody 12H8 light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-AUG-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence is a fragment of the light chain of the monoclonal antibody J591. The invention relates to an isolated antibody or its antigen binding portion (I) which binds to an extracellular domain of prostate specific membrane antigen and which does not require cell lysis to bind
                                                                                                                                                                                         Region
                                                                                                                                                                                                                                                                                                                                                antiatherosclerotic; antianaemic

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score

LETT. 78:181-186(1992).

FUNCTION: ACTS AS A SCAFFOLDING PROTEIN IN THE CELLULOSOME. IT PROMOTES BINDING OF CELLULOSE TO THE CATALYTIC DOMAINS OF THE CELLULOLYTIC ENZYMES PROBABLY THROUGH THE BINDING OF THE NINE REPEATED DOMAINS WITH THE DUPLICATED SEGMENT OF 24 AMINO ACIDS PRESENT IN CATALYTIC SUBUNITS OF THE CELLULOSOME.

SUBCELLULAR LOCATION: CELL SURFACE.

SUMCELLULAR LOCATION: CELL SURFACE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FTLKISR

PROMOTES BINDING OF CELLULOSE TO THE CATALYTIC CELLULOLYTIC ENZYMES.

SUBCELLULAR LOCATION: CELL SURFACE.

DOMAIN: CONTAINS 9 COPIES OF A DOMAIN (COHESIN)
RESIDUES THAT BINDS TO THE DOCKERIN DOMAIN BORN COMPONENTS OF THE CELLULOSOME.

DOMAIN: A 24 RESIDUES DOMAIN IS REPEATED TWICE I DOCKERIN AS IN OTHER C.THERMOCELLUM CELLULOSOME ENZY
